

Name:-Razab Singh Bawa

Roll no.-22f1001146

Email id- 22f1001146@ds.study.iitm.ac.in

About me: - I am Diploma level student of IITM Bs degree

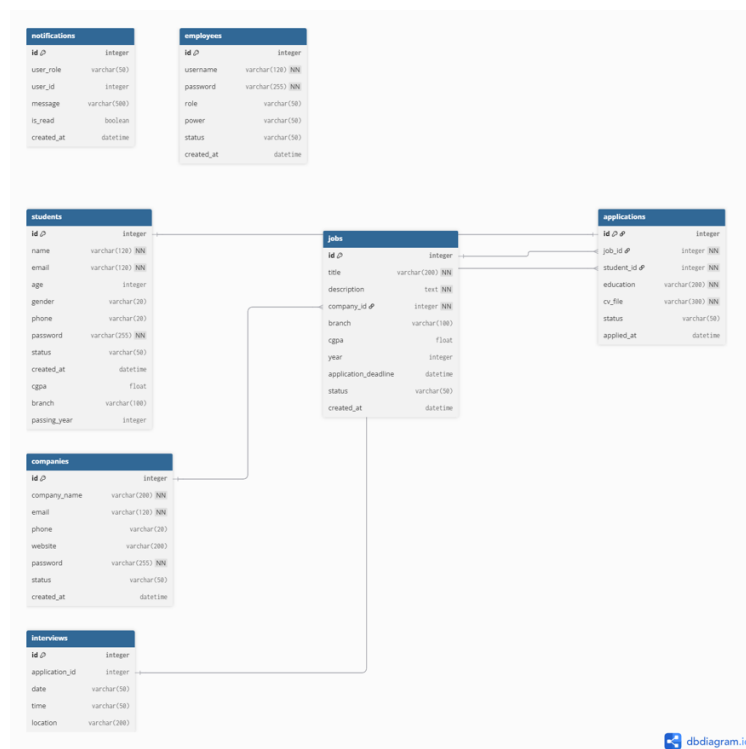

Project Detail: - The Project is about a Brand name Simplex which provide placemt opportunity to student. Companies can come add run placement drives and can select the student after seeing there cv and interview.

Approach:- The app has been engineered with a modular Flask-based backend to enable the multi-role environment for students, companies, and administration, with high performance as a key requirement. The app leverages Celery and Redis for handling asynchronous tasks such as automated reporting and CSV export, which are handled in the background. The reactive frontend with Vue.js and structured data handling with SQLAlchemy enable real-time monitoring of the job application process and placement statistics.

AI/LLM Consistency:- I used ChatGPT (GPT-5)/GEMINI to assist in writing SQL Alchemy model definitions, creating API documentation samples, and improving variable naming consistency. The extent of AI/LLM usage is around 10–15%, limited to code suggestions and documentation formatting.

All final implementation logic, debugging, and integration were done manually.

DataBase Schema:-Below diagram you can see the schema

API RESOURCES ENDPOINT:-Below table describes the api used.

Method	Endpoint	Role	Description
POST	/api/register	All	Creates a pending account for Student, Company, or Employee.
POST	/api/login	All	Validates credentials, sets up session, and returns a JWT token.
GET	/api/me	All	Returns profile data for the currently logged-in user.
GET	/logout	All	Clears the user session and redirects to login.
